axcess

high capacity
cabinets
with superb
aesthetics

Access cabinets are constructed for longevity and continuous high performance. They have a rigid all steel structure with seamless welded corners. Levelling feet are provided.

The tambour doors are formed from co-extruded plastics for a smooth, quiet operation. When opened they slide easily between the inner and outer panels to allow total access without hindrance. The closure rails have 'soft touch handles' with an integrated locking system.

Choice of internal features

Access provides truly exceptional storage ability as they can be tailored to meet specific requirements.

The cabinet can include standard shelves, duplex shelves, pull out reference shelves, vertical files, adjustable file rails, dividers, pull out worktops, lockable drawers and pull out vertical filing cradles. Rackline ensure the exact combination is selected to provide maximum performance.

Cabinet Variations

Variations of this product include an open fronted version manufactured to the same construction and standards as the tambour cabinet.

There is also a two door unit, once again of a similar construction. This has a pair of reinforced steel doors with twin point locking and a full length handle section.

Fastrak

If there is a requirement for frequent moving of the cabinets they can be fitted with a Fastrak base. This makes the cabinet permanently mobile and allows it to be wheeled through and into lifts.
