

Pro-Libero

Pro-Libero is part of Rackline's new range of library shelving to suit the needs of the modern library space.

The Pro-Libero consists of a double skin upright that conceals all fixings which support the structure of shelving. The system has been designed as a 'Braceless system' which means back to back bays have no bracing or solid supports; instead this support is hidden in the framework of the shelving structure.

The overall look of the system is clean and flush, as well as offering maximum storage options and through-bay storage capabilities.

Pro-Libero is available in White Smoke RAL 9002 as standard or any RAL colours*and the system can also include options such as; glass end panels, book dividers and back stops.

The Pro-Libero shelving is available in the following ranges of heights, depths and widths:

- Heights can be from 1275mm up to 2475mm high and any size in between in 25mm increments.
- Shelf widths can be 500mm up to 1200mm wide and any size in between in 50mm increments.
- Shelf depths between 150mm to 600mm and any size in between 50mm increments.
