

Toastrack - Vertical Storage System

Toastrack is Rackline's vertical storage solution for artworks. No more piling up on shelves, Toastrack keeps your items, safe, neat and organised.

With over 40 years experience in the design, manufacture and install of a huge range of storage solutions for a diverse audience, Rackline are the perfect partner to maximise your space.

WHAT IS TOAST RACK?

Toast Rack art storage solutions are compact shelving units divided by internal pole dividers. These allow you to store artworks vertically instead of flat on a shelf. This dramatically reduces physical damage to the items, and provides space for airflow, reducing the risk of damp. With its separated cells the system is obviously named after its resemblance to a toast rack.

WHY CHOOSE TOAST RACK?

Rackline’s Toast Rack vertical storage solution is designed to safely store artworks in a high density, flexible manner.

Toast Rack units are highly configurable, featuring storage compartment heights (adjust the heights in 25mm increments) and widths to suit your individual needs and your desired capacity.

The internal pole dividers are far stronger than standard ‘rod dividers’ and are compatible with our shelving systems.

Toast Rack units can even be fixed to our mobile bases to maximise the capacity of your archive.

HOW DOES IT WORK?

Toast Rack systems are built on our steel shelving units, enhanced with vertical pole dividers that form storage cells within the unit. These pole dividers expand on the standard rod dividers used within competitive products, providing a more robust solution that can take the weight of even heavy artworks.

Toast Rack storage solution can be adjusted in both the height and width of the compartment sizes.

Within Museums and art galleries for example, that tend to hold stock that is of varying shape and size and where storage is constantly fluctuating, this allows them to be adjusted to fit as needs change.

Rackline are the experts in the manufacture of specialised storage systems, supporting organisations worldwide in the safe storage and protection of their valuable items.

OUR OTHER ART STORAGE SOLUTIONS

Lateral Mobile Picture Racking: This solution is installed in numerous museums and archives around the world. The system incorporates double-sided mesh frames fitted to our mobile carriages.

LMPR works identically to, and utilises our mobile shelving bases, enabling you to maximise your floor space. Unlike our pull-out racking solution, only standard front gangways are required for access, and no frame or column structures are required. The choice of mobile base required depends upon the weight loadings and size of the storage system.

Pull-out Picture Racking: This racking comes in two varieties: top supported and bottom supported. Both types are designed and manufactured to fit any storage space and can be used to store hanging items. We have seen everything from rare paintings to mounted animal heads hung from our systems..

The Pull-out Picture Racking is constructed from fully welded steel sections and can be free standing or ceiling supported.

The mesh frame is constructed from heavy gauge wire welded to both faces of a steel frame to give maximum square metre storage space to both sides.
